

# Clinton-Glen Gardner School District

## Curriculum Management System

---

Mathematics

Grade 5

**\* For adoption by all regular education programs as specified and for adoption or adaptation by all Special Education Programs in accordance with Board of Education Policy #220**

**Board Approved: November 18, 2020**

## **CLINTON-GLEN GARDNER SCHOOL DISTRICT**

### **ADMINISTRATION**

**Dr. Seth Cohen, Superintendent/Principal**  
**Mrs. Bernadette Wang, Business Administrator**  
**Mrs. Jacqueline Turner, Assistant Principal**  
**Dr. Jenine Kastner, Director of Special Services**

### **BOARD OF EDUCATION**

**Mr. Brendan McIsaac, President**  
**Mr. Craig Sowell, Vice President**  
**Mrs. Lorraine Linfante**  
**Mr. Carl Sabatino**  
**Dr. Ashutosh Tewari**

## **Acknowledgments**

**Mrs. Amy Brenner**

# **Clinton-Glen Gardner School District**

## **Mission**

The Clinton-Glen Gardner School District is a community who values traditions. Our mission is to nurture and cultivate each child to be a compassionate, curious, and creative thinker, entrusted and empowered to build and lead the future.

## **Philosophy**

The economy in which graduates of our schools will seek employment is more competitive than ever and is rapidly changing in response to advances in technology. To compete in today's global, information-based economy, students must be able to solve real problems, reason effectively, and make logical connections. In this changing world those who have a good understanding of mathematics will have many opportunities and doors open to them throughout their lives. Today's workforce requires mathematical knowledge and skills in areas such as data analysis, problem-solving, pattern recognition, statistics and probability; therefore, our school's curriculum must prepare students for these expectations.

The Clinton-Glen Gardner School is committed to providing all students with the opportunity and the support necessary to learn significant mathematics with depth and understanding. To that end, students will engage in a wide variety of learning activities designed to develop their ability to reason and solve complex problems. Calculators, computers, manipulatives, technology, and the Internet will be used as tools to enhance learning and assist in problem solving. Group work, projects, literature, and interdisciplinary activities will make mathematics more meaningful and aid understanding. Classroom instruction will be designed to meet the learning needs of all children and will reflect a variety of learning styles.

The math curriculum fosters students who:

- Develop computational, conceptual, problem-solving and reasoning skills
- Demonstrate their understanding of mathematical concepts based on higher levels of mathematical thought
- Use technology and other tools as an integral part of solving mathematical problems

## New Jersey State Department of Education New Jersey Student Learning Standards: Mathematics

### **Intent and Spirit of the New Jersey Student Learning Standards: Mathematics**

For more than a decade, research studies of mathematics education in high-performing countries have concluded that mathematics education in the United States must become substantially more focused and coherent in order to improve mathematics achievement in this country. To deliver on this promise, the mathematics standards are designed to address the problem of a curriculum that is "a mile wide and an inch deep."

The math standards provide **clarity and specificity** rather than broad general statements. The standards draw on the most important international models for **mathematical practice**, as well as research. They endeavor to follow the design envisioned by William Schmidt and Richard Houang (2002), by not only **stressing conceptual understanding** of key ideas, but also by continually returning to organizing principles (coherence) such as place value and the laws of arithmetic to structure those ideas.

In addition, the "sequence of topics and performances" that is outlined in a body of math standards must respect what is already known about how students learn. As Confrey (2007) points out, developing "sequenced obstacles and challenges for students...absent the insights about meaning that derive from careful study of learning, would be unfortunate and unwise." Therefore, the development of the standards began with research-based learning progressions detailing what is known today about how students' mathematical knowledge, skill, and understanding develop over time. The knowledge and skills students need to be prepared for mathematics in college, career, and life are woven throughout the mathematics standards.

### **Mathematics: Standards for Mathematical Practice Interpreted**

The Standards for Mathematical Practice describe varieties of expertise that mathematics educators at all levels should seek to develop in their students. These practices rest on important "processes and proficiencies" with long standing importance in mathematics education. The first of these are the NCTM process standards of problem solving, reasoning and proof, communication, representation and connections. The second are the strands of mathematical proficiency specified in the National Research Council's report *Adding It Up*: adaptive reasoning, strategic competence, conceptual understanding (comprehension of mathematical concepts, operations and relations), procedural fluency (skill in carrying out procedures flexibly, accurately, efficiently and appropriately) and productive disposition (habitual inclination to see mathematics as sensible, useful and worthwhile, coupled with a belief in diligence and one's own efficacy).

The Standards for Mathematical Practice are:

- 1. MAKE SENSE OF PROBLEMS AND PERSEVERE IN SOLVING THEM.**

As you look at or read a mathematical problem, think about what it means and what it is asking you to do. Also think about what would be a good way to start solving it. Ask yourself:

- What does the problem tell me?
  - What information is given?
  - What are the relationships among parts of the problem?
  - What is the goal of solving the problem?
  - Have I seen other problems similar to this one?
- What does the problem ask me to find out (solve)?
- How should I start solving the problem?
- Can pictures or a drawing help me to figure out how to solve the problem?
- Does how I'm answering the problem make sense with what the problem is asking?
- What are some other ways to solve the problem?
- Can I use another way to check if my answer is correct?
- Does my answer make sense?

**2. REASON ABSTRACTLY AND QUANTITATIVELY.**

Understand the relationship of numbers and number problems and represent them using pictures, drawings or symbols. Talk about the parts of number problems using pictures, drawings or symbols as well as how the pictures, drawings or symbols represent and help explain the problem. Show how using different numbers or operations in the same problem changes it.

**3. CONSTRUCT VIABLE ARGUMENTS AND CRITIQUE THE REASONING OF OTHERS.**

Use objects, drawings, diagrams or actions to construct arguments about math problems with understanding and using appropriate vocabulary to explain the reasoning process. Build a local argument, communicate it with others, justify your reasoning process and respond to the reasoning process someone else uses. Express agreement if both arguments are correct and explain why an argument is flawed if it is.

**4. MODEL WITH MATHEMATICS.**

Apply mathematical skills to everyday life, society, the workplace and other situations; identify important quantities in practical situations; write an equation to describe a situation; revise solutions; use tools such as diagrams, two-way tables, graphs, flowcharts and formulas to show relationships; analyze relationships to draw conclusions, interpret results in context and reflect on whether the results make sense.

**5. USE APPROPRIATE TOOLS STRATEGICALLY.**

Identify and make decisions regarding which tool, such as paper and pencil, models, rulers, spreadsheets, etc., to use to help solve mathematical problems as well as know when a tool is not the right one to use. Use technological and other tools to deepen understanding.

**6. ATTEND TO PRECISION.**

Communicate precisely when discussing math incorporating the following:

- Use clear definitions.
- Choose, use and explain symbols correctly, consistently and appropriately.
- Specify units of measure and labels correctly.
- Avoid careless errors.
- Follow formulas to explain thinking to others.

**7. LOOK FOR AND MAKE USE OF STRUCTURE.**

Look for and identify structure and patterns in mathematics (for example, three and seven more is the same amount as seven and three more, or sort shapes according to their number of sides) and see if the pattern or structure changes.

**8. LOOK FOR AND EXPRESS REGULARITY IN REPEATED REASONING.**

Look for repetition in calculations and numeric thinking, such as skip counting. Pay attention to the whole problem and the details and continuously evaluate the accuracy and reasonableness of both intermediate and final answers.

**CONNECTING THE STANDARDS FOR MATHEMATICAL PRACTICE TO THE STANDARDS FOR MATHEMATICS CONTENT**

The Standards for Mathematical Practice describe ways in which developing student practitioners of the discipline of mathematics increasingly ought to engage with the subject matter as they grow in mathematical maturity and expertise throughout the elementary, middle and high school years. Designers of curricula, assessments and professional development should all attend to the need to connect the mathematical practices to mathematical content in mathematical instruction. The Standards for Mathematical Content are a balanced combination of procedure and understanding. Expectations that begin with the word “understand” are often especially good opportunities to connect the practices to the content. Students who lack understanding of a topic may rely on procedures too heavily. Without a flexible base from which to work, they may be less likely to consider analogous problems, represent problems coherently, justify conclusions, apply the mathematics to practical situations, use technology mindfully to work with the mathematics, explain the mathematics accurately to other students, step back for an overview or deviate from a known procedure to find a shortcut. In short, a lack of understanding effectively prevents a student from engaging the mathematical practices. In this respect those content standards, which set an expectation of understanding are potential “points of intersection” between the Standards for Mathematical Content and the Standards for Mathematical Practice. These points of intersection are intended to be weighted toward central and generative concepts in the school mathematics curriculum that most merit time, resources, innovative energies and focus necessary to qualitatively improve the curriculum, instruction, assessment, professional development and student achievement in mathematics.

**Grade 5  
Mathematics**

**Scope and Sequence  
September – December (approximately 60 days)**

**Quarter I: 21<sup>st</sup> Century Skills and Themes**

1. **Creativity & Innovation** Global Awareness
2. **Financial, Economic, Business and Entrepreneurial Literacy**
3. **Civic Literacy**
4. Health Literacy
5. Environmental Literacy

**Topic: Operations and Algebraic Thinking**

- I. Numerical Expressions
  - a. Write, evaluate, and calculate numerical expressions
  - b. Order of operations
  - c. Parentheses
  - d. Exponents
- II. Operations
  - a. Division of multi-digit dividends and divisors

**Topic: Number and Operations in Base Ten**

- III. Place Value
  - a. Expanded and standard form
  - b. Powers of ten
- IV. Decimals to the thousandths
  - a. Comparisons
  - b. Rounding
  - c. Conversions and equivalency with fractions
- V. Decimal Operations
  - a. Addition to the hundredths
  - b. Subtraction to the hundredths
  - c. Multiplication to the hundredths
  - d. Division to the hundredths

**Integrated Accommodations and Modifications**

**Special Education Students (See appendix)**  
**English Language Learners (See appendix)**  
**Students at Risk (See appendix)**  
**Gifted and Talented Students (See appendix)**

## Assessments

**Formative:** • Group Work • Individual Work • Partner Work • Worksheets • Quizzes • Exams • Homework • Oral Questions • Student Participation • Projects

**Summative:** Teacher observation • Student participation • Tests/Exams • Quizzes • Projects

**District Benchmark:** [Link-It](#)

**Alternative Assessments:** Various Performance Assessments designed with student input

## Core Instructional Materials and Supplemental Materials

Go Math Reteach Activities

Go Math Enrichment Activities

Go Math Personal Math Trainer Online Activities

Go Math Interactive Whiteboard Activities

Go Math STEM Activities

Go Math *Getting Ready for the NJSLA* Assessments

Text/Resource Books, Internet, Worksheets, Teacher Manual, DVDs, Manipulatives

## Interdisciplinary Connections

**Science 5-ESS1-2.** Represent data in graphical displays to reveal patterns of daily changes in length and direction of shadows, day and night, and the seasonal appearance of some stars in the night sky. **3-5-ETS1-1.** Define a simple design problem reflecting a need or a want that includes specified criteria for success and constraints on materials, time, or cost. **3-5-ETS1-2.** Generate and compare multiple possible solutions to a problem based on how well each is likely to meet the criteria and constraints of the problem.

### Anchor Standards for Reading

NJSLSA.R1. Read closely to determine what the text says explicitly and to make logical inferences and relevant connections from it; cite specific textual evidence when writing or speaking to support conclusions drawn from the text. NJSLSA.R4. Interpret words and phrases as they are used in a text, including determining technical, connotative, and figurative meanings, and analyze how specific word choices shape meaning or tone.

### Anchor Standards for Writing

NJSLSA.R7. Integrate and evaluate content presented in diverse media and formats, including visually and quantitatively, as well as in words. NJSLSA.W2. Write informative/explanatory texts to examine and convey complex ideas and information clearly and accurately through the effective

selection, organization, and analysis of content. NJSLSA.W9. Draw evidence from literary or informational texts to support analysis, reflection, and research.

**Anchor Standards for Speaking and Listening  
Comprehension and Collaboration**

NJSLSA.SL5. Make strategic use of digital media and visual displays of data to express information and enhance understanding of presentations.

RF.5.4. Read with sufficient accuracy and fluency to support comprehension.

A. Read grade-level text with purpose and understanding.

**Craft and Structure**

NJSLSA.R4. Interpret words and phrases as they are used in a text, including determining technical, connotative, and figurative meanings, and analyze how specific word choices shape meaning or tone.

**Integration of technology through the NJSL**

Understand and use technology systems. 8.1.5.A.1 Select and use the appropriate digital tools and resources to accomplish a variety of tasks including solving problems. Select and use applications effectively and productively. 8.1.5.A.2 Format a document using a word processing application to enhance text and include graphics, symbols and/ or pictures. Advocate and practice safe, legal, and responsible use of information and technology. 8.1.5.D.1 Understand the need for and use of copyrights. 8.1.5.D.2 Analyze the resource citations in online materials for proper use. 8.2.5.A.1 Compare and contrast how products made in nature differ from products that are human made in how they are produced and used. 8.2.5.A.2 Investigate and present factors that influence the development and function of a product and a system.

**Career Education & Financial Literacy Integration of 21<sup>st</sup> Century Skills (NJSL 9)**

9.1.8.A.1 Explain the meaning and purposes of taxes and tax deductions and why fees for various benefits (e.g., medical benefits) are taken out of pay. 9.1.8.A.2 Relate how career choices, education choices, skills, entrepreneurship, and economic conditions affect income. 9.1.8.B.1 Distinguish among cash, check, credit card, and debit card. 9.1.8.B.2 Construct a simple personal savings and spending plan based on various sources of income. 9.1.4.C.1 Explain why people borrow money and the relationship between credit and debt. 9.1.4.C.2 Identify common sources of credit (e.g., banks, credit card companies) and types of credit (e.g., loans, credit cards, mortgages).  
CRP1. Act as a responsible and contributing citizen and employee. CRP2. Apply appropriate academic and technical skills. CRP3. Attend to personal health and financial well-being.

**9.1 Personal Financial Literacy**

- Model Curriculum – Personal Financial Literacy Lesson Plans
  - [Lesson 1: Risks and Benefits of Entrepreneurship](#)
  - [Lesson 2: Compound Interest: Your Best Friend or Worst Enemy](#)

**December through March (approximately 60 Days)**

**Quarter II: 21<sup>st</sup> Century Skills and Themes**

**Critical Thinking and Problem Solving/Collaboration**

- 1. Critical Thinking & Problem Solving**
- 2. Communication & Collaboration**
3. Media Literacy
4. Information Literacy
5. Information, Communication & Technology

**Topic: Number and Operations – Fractions**

- VI. Adding and Subtracting Fractions
  - a. Greatest Common Factor
  - b. Least Common Multiple
  - c. Mixed numbers and improper fractions
  - d. Equivalencies
  - e. Addition
  - f. Subtraction
- VII. Multiplying and Dividing Fractions
  - a. Multiplication
    - i. Whole number by fraction
    - ii. Fraction by fraction
    - iii. Estimating products
    - iv. Calculating area
  - b. Division
    - i. Fraction by whole number
    - ii. Whole number by fraction
    - iii. Fraction as a division problem

**Topic: Geometry**

- VIII. Polygons
  - a. Properties of
  - b. Regular
  - c. Irregular

**Integrated Accommodations and Modifications**

- Special Education Students (See appendix)**  
**English Language Learners (See appendix)**  
**Students at Risk (See appendix)**  
**Gifted and Talented Students (See appendix)**

Demonstrate how productivity and accountability contribute to realizing individual or group work goals within or outside the classroom. (9.1.8.F.1)</p>		

<b>Suggested days of Instruction</b>	<b>Curriculum Management System</b>	<b>Topic: Numerical Expressions</b>	
	<b><u>Subject/Grade Level:</u></b> Grade 5 Mathematics	<u>Goal 1:</u> The student will be able to write and interpret numerical expressions.	
	<b>Objectives / Cluster Concepts / Cumulative Progress Indicators (CPI's)</b> <b>The student will be able to:</b>	<b>Essential Questions, Conceptual Understandings</b>	<b>Instructional Tools / Materials / Technology / Resources / Learning Activities / Interdisciplinary Activities / Assessment Model</b>

<b>Suggested days of Instruction</b>	<b>Curriculum Management System</b>	<b>Topic: Place Value</b>	
	<b>Subject/Grade Level:</b> Grade 5 Mathematics	<b>Goal 2:</b> The student will be able to expand their understanding of the place value to include decimals to the thousandths.	
	<b>Objectives / Cluster Concepts / Cumulative Progress Indicators (CPI's)</b> <b>The student will be able to:</b>	<b>Essential Questions, Conceptual Understandings</b>	<b>Instructional Tools / Materials / Technology / Resources / Learning Activities / Interdisciplinary Activities / Assessment Model</b>
1 wk	<p>2.1. Recognize place value to the right is 1/10 and to the left is ten times larger. (5.NBT.1)</p> <p>2.2. Use whole number exponents to denote powers of ten. (5.NBT.2)</p> <p>2.3. Use expanded and standard forms. (5.NBT.3.a)</p> <p>2.4. Compare decimals to the thousandths. (5.NBT.3.b)</p> <p>2.5. Round decimals to any place value. (5.NBT.4)</p>	<p><b>Essential Questions:</b> How do mathematical ideas interconnect and build on each other to produce a current whole? How can we compare and contrast numbers? How can we use the base ten number system to make sense of the world around us?</p> <p><b>Conceptual Understandings:</b> One representation may sometimes be more helpful than another, and, used together, multiple representations give a fuller understanding of a problem.  A quantity can be represented numerically in various ways. Problem solving depends upon choosing ways wisely.  Numerically fluency includes both the understanding of and the ability to appropriately use numbers.</p>	<p><b>Go Math Chapter 3; Lessons 3.1-3.4: Add and Subtract Decimals</b></p> <p>Go Math Chapter 3 Mid-Chapter Checkpoint</p> <p><b>Assessment Models:</b> Make a place value model from the billions to the millionths.  Express whole numbers as exponents in base 10.  Express positive powers of 10 in standard form, exponential form, and expanded form.  Compare, order, and round a given decimal to thousandths.  Convert a given terminating decimal into a fraction and <math>\overline{VV}</math>.  Match a given fraction with its equivalent decimal and <math>\overline{VV}</math>.</p>
